WordStock
POS Hourly Sales Reporting

POS Hourly Sales Reporting scans your system's Point-of-Sale log files after an entire day has completed, notes the time and date stamp of each transaction, adds the value of all transactions, and prints or exports a report of adjusted hourly sales transactions in dollars.

'Adjusted hourly sales' are **net** sales, once returns and other credits have been subtracted. Therefore, the figure shown in the report is the actual change since the previous hour or other reporting interval.

Note: The standard report is hourly, as illustrated at right, but can be configured to present other time periods, via customizable tables

As noted, you can export the report for use in other programs. For example, if you're maintaining an hourly sales spreadsheet in Microsoft® *Excel*, or want to send hourly sales data to an accounting program, you can export the data as easily as you do any other export.

POS Hourly Sales Reporting allows you to choose the date to report on, provided that you still have that day's POS logs available, either active or archived.

Most WordStock customers maintain POS log files for less than a month, so check with WordStock Support to see how your system is configured and if you have enough hard drive capacity if you want to maintain these figures for a longer period.

POS Hourly Sales Reporting costs $5/month, plus installation. We bill installation for this program at our standard rate of $95/hour and should be able to complete it in less than an hour-and-a-half. The software is configured to run from a menu selection but we can also customize it to run as an automatic, time-triggered process for an additional charge.

```
PROGRAM TO GENERATE A PERIOD SALES REPORT

Enter the number of minutes per report period: 45
Period length of 45 entered, use this? y
Report will use a period length of: 45 minutes

Enter the date to do period report for: 010202
Sorting POS data, please wait...
```

In the sample report shown below, the left column shows local time, while the right column represents total adjusted sales, in dollars, for that hour.

The **total** shown at the end of the report will match the total sales on your daily cash summary report.
